

Review of the points from the peer reviews we got

- Most of the points were about the missing sections like Results and Discussion.
- One of the points mentioned was the title- Since we are not yet sure of the text feature, the group decided to review this after the technical work is done.
- Another point was that it was a bit confusing what we want to do - even though our aim is clear, to find the correlation between usefulness and a text feature, so we will review the other sections of the paper once we have the results.

Text Feature and Ways to Implement It

- Syntactic Complexity - L2SCA, Coh-Metrix
- Bag of words - how abuses reflect on positive and negative reviews.
- Sentiment analysis - how sentiment affects usefulness
- Adjectives or ad verbs

Each of us chose one feature, that we can try to implement on the dataset(kul has already done some more cleaning and preprocessing and uploaded it on GitHub) and see if there is any correlation, The final paper may be a comparative study of how each of these features affected usefulness.

Things to do

- Syntactic Complexity -Aparna
- Bag of words - Donal
- Sentiment analysis - Sharon
- Adjectives or ad verbs - kul
- Tejas can chose any other feature
- Next Meeting - Tuesday- 24/03/2020
